World's First 5D Body Image Scanner & 4-in-1 Handheld Explosive Detector

Features:

- 5 Dimensional full body and non-contact scanning;
- Show and mark hidden subjects automatically;
- Intelligent protection or privacy.

TR1000QC is a novel handheld multifunction trace detector model based on Ion Mobility Spectrometry (IMS), built on the 16-years-field-proven TR series.

The equipment uses active millimeter wave imaging technology and AI image recognition technology to quickly check the surface of human body in a non-contact way, and automatically detect metal and non-metal contraband and prohibited items hidden in clothes and on human surfaces, including a certain dose of metal, ceramics, liquid, powder and other material substance.

This model enables users to detect trace of explosive & drug substances sampled from passenger & cargo surfaces and "smell" toxic industrial gas & chemical warfare agent.

Real time • Precision • Accuracy • AI image recognition
